EXPERIENCE

MongoDB, New York City, USA

Senior Software Engineer – Atlas Growth Platforms

February 2024 – Present

- **Growth Platforms** | Founding engineer of MongoDB's Growth platform team, selected to establish the engineering foundation supporting Growth feature teams; helped build the organization by hiring and onboarding engineers and partnering on the hiring of the Engineering Manager and Product Manager as the team scaled
- **Atlas App Connections** 📁 | Technical lead for the Growth-owned product and application layer of Atlas App Connections, owning full-stack architecture across Java and React + TypeScript. Led a 3-engineer project team while driving technical direction, delegation, cross-team orchestration, and go-to-market readiness across Growth, IAM, Product, Design, Security, Documentation, Analytics, and Technical Services
- **Partner API** | Led an ambiguous cross-functional initiative from architecture through launch, coordinating across 7 teams spanning two Engineering teams, Analytics, Marketing, Product, Documentation, and Sales; drove frontend, backend, QA, security, and operational workstreams, launching the service with 3 partners on day one
- **Partner Credential Rotation Architecture** | Designed a reusable credential-rotation architecture that evolved a partner-specific manual process into a controlled, API-driven capability supporting current and future connection mechanisms
- **App Connections – MCP** 📁 | Extended the App Connections platform to AI-assisted development workflows through the Model Context Protocol (MCP), enabling Atlas database and control-plane capabilities to be exposed to AI clients alongside Partner API connections.
- **Azure Native Integration** 📁 | Led Phase I of the MongoDB Atlas as an Azure Native Integration end-to-end with a 3-engineering team and served as Growth Platforms support DRI for Phase 2, driving authorization, feature-flagged rollout, auditability, request traceability, QA, and launch readiness
- **Technical Leadership & Mentorship** | Mentored a summer intern and 2 Software Engineer III, providing technical guidance and helping engineers not only navigate complex full-stack projects, but also their MongoDB journey

Software Engineer III – Atlas Growth Feature

October 2021 – January 2024

- **Vercel Native Integration** 📁 | Built and extended MongoDB's native Vercel integration, including secure Data API connectivity and platform-native provisioning flows for Atlas organizations, projects, and clusters
- **Ecosystem** 📁 | Built MongoDB's CMS-driven integrations marketplace from scratch using React, TypeScript, and Java, creating a configurable, searchable experience for 250+ integrations that increased discoverability by 100% at launch
- **Growth & Monetization** 📁 | Designed and launched over 10 A/A, A/B, and multivariate experiments focused on Atlas activation and paid-tier conversion, in partnership with Product, Marketing, Analytics, and Growth Engineering; an interactive Atlas Charts experience produced a 138% activation lift

Goldman Sachs, Jersey City, USA

Software Engineer II

December 2020 – October 2021

- **Content Tool** | Conceptualized and led development of a full-stack application using Node.js, React, Java, and internal platforms to automate fact-card generation, saving the firm an estimated ~\$1.5M annually.
- **Investment Management Division Conflicts** | Made architectural and design decisions and supervised development by 2 engineers for a React-based application used to evaluate potential conflicts of interest in business proposals

Software Engineer I

April 2019 – December 2020

- **Fixed Income Automation** | Designed Java server-side automation for fixed-income reporting, onboarding 20+ reports over 6 months and eliminating 400+ days of manual work annually
- **Client Reporting Platform** | Led development and coordinated 4 worldwide support staff responsible for daily/monthly publication of 1,000+ ETFs and mutual funds to GSAM.com
- **Fund Data** | Replaced a third-party renderer with an in-house solution for 1,000+ onshore funds, achieving 100% result parity and saving approximately \$700K annually

Analyst and Web Developer

- **SharePoint** | Developed and supported applications used by 20,000+ employees and led the 2013-to-2016 infrastructure upgrade for 5 global teams
- **Gamification** | Engineered a reward-based website for Worldwide Business Operations and received the Go Getter Award

TECHNICAL SKILLS

Primary Languages: Java, JavaScript / TypeScript, SQL
Frameworks & APIs: React, Node.js, Spring, REST APIs, gRPC
Platform & Security: OAuth 2.1, OIDC, delegated access, credential rotation, feature flags, Model Context Protocol (MCP)
Growth & Observability: A/B & multivariate experimentation, Segment, Amplitude, Mixpanel, Grafana, Sentry
Cloud & Data: MongoDB, MySQL, Oracle, Elasticsearch, AWS, Microsoft Azure, Google Cloud Platform

EDUCATION

Northeastern University, Boston, MA

December 2018

Master of Science in Computer Science

Christ University, Bangalore, India

May 2014

Bachelor of Computer Application
